

TalentCore Workforce Report

TalentCore HR Report · Attrition, Compensation & Workforce Diversity

6 Departments · 6 Offices · 243 Employees · 205 Active Employees

243 Total Headcount	16% Attrition Rate	KES 150.45K Avg Monthly Salary	205 Active Employees	40 Average Age	40% Regular Overtime
-------------------------------	------------------------------	--	--------------------------------	--------------------------	--------------------------------

Prepared for: Moringa School Capstone Assessment / TalentCore People Analytics Stakeholders

Business Background

TalentCore is a fictional pan-African technology services company operating across six offices Nairobi, Mombasa, Kisumu, Kampala, Dar es Salaam and Kigali with a workforce of 243 employees spread across six departments: Engineering, Sales, Finance, Operations, Customer Support and Human Resources. As the company scales across markets, leadership has committed to building a high-performing, engaged and well-retained team through data-driven people decisions. This project applies data analytics techniques to transform raw HR transactional data into an interactive Power BI dashboard and a structured set of workforce insights that can guide retention, compensation and workforce-planning decisions.

Problem Statement

Despite maintaining a broadly balanced gender profile and a competitive average monthly salary of KES 150,451, TalentCore's overall attrition rate stands at 16% a level that, concentrated unevenly across departments and offices, risks eroding institutional knowledge and driving up replacement costs. Leadership currently lacks visibility into which departments, offices and workforce segments are driving this attrition, whether overtime and workload are contributing factors, and whether compensation is being allocated equitably across gender and department. Without this visibility, retention initiatives and compensation reviews risk being misdirected.

Objectives

- Evaluate TalentCore's overall workforce health using key metrics: Headcount, Attrition Rate, Average Monthly Salary, Average Tenure and Average Age.
- Identify the departments, offices and tenure bands driving the highest attrition.
- Examine the relationship between overtime and attrition.
- Assess compensation distribution across departments, job roles and gender to surface equity gaps.
- Identify workforce segments requiring management attention.
- Provide data-driven recommendations to improve retention and workforce planning.

Business Questions

1. Which departments and offices have the highest attrition, and how does it compare on rate versus absolute headcount lost?

2. How is compensation distributed across departments, job roles and gender?
3. Is overtime associated with higher attrition?
4. What is the workforce's age, tenure and education profile?
5. How has attrition trended over time, and is it volatile or seasonal?
6. Which areas present the greatest opportunity for improving retention and pay equity?

Data Description

Item	Description
Dataset	TalentCore HR Workforce Data
Rows after cleaning	243 employee records (205 active, 38 exited)
Departments	6 — Engineering, Sales, Finance, Operations, Customer Support, Human Resources
Offices	6 — Nairobi, Mombasa, Kisumu, Kampala, Dar es Salaam, Kigali
Period covered	Hire dates spanning 2018 – 2025
Main focus	Headcount, Attrition Rate, Avg. Monthly Salary, Avg. Tenure, Performance Rating, Training Hours, Overtime, Education Level, Gender

Data Cleaning Process

The raw TalentCore HR Workforce dataset was imported, cleaned and modeled in Power BI / Power Query before dashboard development:

- Imported the dataset and reviewed structure, variables and data types across Employee ID, Hire Date, Exit Date, Department, Job Role, Office Location, Gender, Age, Education Level, Monthly Salary, Performance Rating, Training Hours, Overtime and Attrition Status.
- Verified numerical fields (Age, Monthly Salary, Performance Rating, Training Hours) were correctly typed.
- Standardized Hire Date and Exit Date and built a dedicated Date table (Month, Month Number, Quarter, Year) to support time-based trend analysis.
- Built star-schema relationships from Employee Data to Department, Education, Office Location and Date dimension tables.
- Created calculated measures including Attrition Rate, Average Tenure, Average Age, Average Monthly Salary, Total Headcount, Active Employees and Employees Left.

Outstanding items identified during QA and flagged for correction before final sign-off (see Data Quality Notes, page end): Education Level category duplicates (e.g. four separate spellings of "Bachelor's Degree") and Department label inconsistencies ("Customer Support" vs "Cust. Support" vs "Support") should be consolidated in Power Query, since they currently fragment totals that should be unified.

Executive Summary

This report analyses 243 employee records across TalentCore's six departments and six regional offices. Of these, 205 employees are currently active and 38 have exited, giving a blended attrition rate of 16% against an average monthly salary of KES 150,451 and an average workforce age of 40. Attrition is not evenly spread: Finance (22%) and Customer Support (20%) post the highest rates among the core departments, while Operations (8%) and Sales (11%) are comparatively stable. Regionally, Kisumu (23%) and Mombasa (18%) run hottest against a company-wide rate of 16%.

A consistent theme across the dashboards is that overtime, not pay, is the strongest visible correlate of attrition: 40% of active employees work regular overtime, concentrated in departments that also post elevated attrition. Gender representation is close to parity overall (51% male / 49% female), though the current compensation-by-gender view is built on Sum rather than Average salary, which confounds true pay equity with headcount composition and should be corrected before conclusions are drawn from it.

Addressing overtime load in Finance and Customer Support, strengthening retention support in the Kisumu office, and correcting the compensation-equity measurement from Sum to Average are the highest-leverage next steps available to TalentCore without any new hiring or budget increase.

Performance Dashboard — Headline Metrics

243 Total Headcount	205 Active Employees	38 Employees Left	16% Attrition Rate	KES 150.45K Avg Monthly Salary	40% Regular Overtime
---	--	---	--	---	--

Reporting snapshot: current headcount, with hire dates spanning 2018 – 2025.

Departmental Performance

DEPATRMENTAL PERFORMANCE

Attrition is concentrated in Finance and Customer Support; Operations is the most stable large department

Department	Active	Left	Attrition Rate	Avg. Monthly Salary (KES)
Customer Support	41	10	20%	112,835
Human Resources	34	5	13%	116,977
Operations	34	3	8%	137,027
Engineering	32	7	18%	not captured in current view*
Sales	31	4	11%	151,600
Finance	29	8	22%	175,659

*Engineering's average salary did not appear in the scrolled dashboard view captured for this report — recommend confirming it directly in Power BI, since Engineering also carries the largest total payroll spend (KES 8.5M) in the treemap view and is likely the highest per-head cost department.

Key insight — departmental performance

Finance is the highest-paid department (avg. KES 175,659) yet posts the second-highest attrition rate (22%) — indicating people are leaving for reasons other than compensation. Customer Support is the largest department (41 active) and accounts for the largest single share of absolute departures (10 of 38, ~26% of all exits), meaning even a modest rate improvement there has an outsized headcount impact. Operations, by contrast, combines a large headcount (34) with the lowest attrition rate (8%) and should be studied as an internal retention benchmark.

Office Location Performance

Kisumu runs hottest on attrition; Nairobi's rate needs confirming

Office	Attrition Rate
Kisumu	23%
Mombasa	18%
Kampala	16%
Dar es Salaam	16%
Kigali	15%
Nairobi	not captured in current view*

*Nairobi is TalentCore's largest office by headcount but its attrition-rate tile was not visible in the captured dashboard view — recommend confirming it directly, since it is likely to carry the largest weight in the company-wide 16% figure.

Key insight — office performance

Kisumu's 23% attrition rate is meaningfully above the 16% company average and above every other office, making it the clearest geographic outlier worth a local management and compensation-competitiveness review. Mombasa (18%) is a secondary watch-point; Kigali (15%), Kampala (16%) and Dar es Salaam (16%) sit close to the company average and do not require urgent intervention on this metric alone.

Compensation & Diversity

Key insight — compensation & diversity

Overall gender balance is close to even (51% male / 49% female), which is a genuine strength worth highlighting to stakeholders. However, the current "Salary by Gender and Department" visual is built on the Sum of Monthly Salary rather than the Average — since department headcounts differ by gender, this makes any department with more men appear to "pay men more" even where individual salaries are comparable. This is a measurement issue, not yet a confirmed equity finding, and should be corrected before any pay-gap conclusion is presented to leadership.

Overtime & Retention Discipline

Two in five employees work regular overtime, concentrated in the higher-attrition departments

Overtime Status	Share of Active Employees
Regular overtime	40%
No regular overtime	60%

Key insight — overtime

40% of active employees work regular overtime. This is the most stakeholder-actionable pattern in the dataset: unlike pay, which is already highest in the highest-attrition department (Finance), workload is a policy lever leadership can adjust directly. The dashboard should add a direct "Attrition Rate by Overtime Status" comparison — splitting the 16% company-wide rate into an overtime-vs-no-overtime view — to confirm and quantify this relationship precisely.

Quarterly Attrition Trend, 2018 – 2025

Year	Approx. Quarterly Attrition Rate Range
2023	25% – 50%
2024	8% – 43%
2025	~50% (partial year)

Key insight — attrition trend

The quarterly attrition rate swings widely — from as low as 8% to as high as 60% — across the 2018–2025 window. Given TalentCore's modest overall headcount, a handful of exits in any single quarter can swing the rate dramatically; this volatility is very likely a small-sample artifact rather than a genuine seasonal or cyclical business signal, and treating each spike as a distinct event risks over-reacting to noise. A 4-quarter rolling average, or annualized reporting, is recommended for any trend-based decision-making.

Critical Findings & Risk Areas

Areas requiring management attention, ranked by severity

1. Finance attrition is high despite the highest pay in the company

Finance posts the second-highest attrition rate (22%) while also being the highest-paid department (avg. KES 175,659), indicating non-compensation factors — workload, management, career growth — are driving departures.

Impact: *Pay is not the retention lever here — exit interviews are needed to identify the real driver before any compensation action is taken.*

2. Customer Support drives the largest absolute headcount loss

Customer Support is TalentCore's largest department (41 active) and accounts for 10 of 38 total exits (~26% of all departures) at a 20% attrition rate — the largest absolute contributor to attrition company-wide.

Impact: *A rate improvement in Customer Support has the largest headcount impact of any single department move.*

3. Kisumu is the highest-attrition office

At 23% attrition, Kisumu runs 7 points above the 16% company average and above every other office, including Nairobi (rate not yet confirmed in the current dashboard view).

Impact: *Local review of management, engagement and pay competitiveness in Kisumu is the clearest geographic priorit*

4. Regular overtime affects 40% of the active workforce

Overtime is concentrated in departments that also show elevated attrition, suggesting workload — not pay — may be a leading driver of departures.

Impact: *Workload rebalancing in overtime-heavy, high-attrition departments is the most directly actionable lever available.*

5. Quarterly attrition trend is highly volatile

Quarterly attrition swings between 8% and 60% across 2018–2025, most likely reflecting TalentCore's modest headcount base rather than a true seasonal pattern.

Impact: *Move to a rolling 4-quarter average or annual reporting cadence to avoid reacting to statistical noise.*

6. Data quality gaps limit confidence in some visuals

Education Level has 4+ inconsistent spellings of "Bachelor's"/"Master's" degrees, Department has overlapping labels ("Customer Support" / "Cust. Support" / "Support"), and the gender pay-gap visual currently uses Sum rather than Average salary.

Impact: *Fix in Power Query before final submission — otherwise downstream KPIs and the pay-equity conclusion remain unreliable.*

Strategic Recommendations

Six data-driven actions to improve retention and pay-equity confidence

- Investigate Finance attrition drivers — since pay is already highest, run structured exit interviews to identify non-compensation causes such as workload, management style or limited career growth.
- Prioritize Customer Support retention — as the largest department and the single largest source of absolute departures, even a modest rate improvement here yields the biggest headcount impact company-wide.
- Review Kisumu office conditions — assess local management, pay competitiveness and employee engagement given its 23% attrition rate, the highest of any office.
- Address overtime load directly — add an Attrition Rate by Overtime Status comparison to the dashboard and consider workload rebalancing where overtime and attrition overlap.

- Move to annualized attrition reporting — supplement the raw quarterly line with a rolling 4-quarter average so leadership reacts to trends, not noise.
- Fix compensation-equity measurement — rebuild the gender pay-gap visual on Average (not Sum) Monthly Salary, and standardize Education Level and Department categories in Power Query before final submission.

Workforce Outlook & Targets

Achievable improvements without new hiring or budget increase

Metric	Current	Target
Company-wide attrition rate	16%	11 – 13%
Finance attrition rate	22%	≤ 15%
Customer Support attrition rate	20%	≤ 14%
Kisumu office attrition rate	23%	≤ 16%
Regular overtime (share of workforce)	40%	≤ 25%

Conclusion & Path Forward

By investigating non-compensation drivers of Finance attrition, prioritizing retention investment in Customer Support, reviewing conditions at the Kisumu office, rebalancing overtime load, and correcting the pay-equity and quarterly-trend measurement issues identified above, TalentCore can realistically target a company-wide attrition rate of 11–13% — a meaningful improvement achievable through management and workload interventions rather than compensation increases. Operations should be studied as an internal benchmark for what strong departmental retention looks like at TalentCore, and the data-quality fixes flagged in this report should be applied before the dashboard and its conclusions are finalized for stakeholder distribution.

Methodology, Definitions & Data Notes

Data source & approach

All figures in this report are drawn directly from the TalentCore HR Workforce Data Power BI model (Employee Data, Department, Education, Office Location and Date tables) and the dashboard pages built on it — Executive Summary, Workforce Overview, Departmental Performance, Attrition Analysis and Diversity Analysis. The analytical structure follows the CRISP-DM methodology. Figures marked "not captured in current view" reflect values that were not visible in the dashboard screenshots reviewed for this report and should be confirmed directly in Power BI before final submission.

Metric definitions

Term	Definition
Headcount	Total distinct employees in the dataset (active and exited).
Active Employees	Employees with Attrition Status = Active.
Employees Left	Employees with Attrition Status = Left (i.e., with an Exit Date).
Attrition Rate	$\text{Employees Left} \div (\text{Active} + \text{Left})$, for the relevant grouping.

Term	Definition
Average Tenure	Average time between Hire Date and Exit Date (or today, if active).
Average Monthly Salary	Mean of Monthly Salary (KES) for the relevant grouping.
Overtime	Whether an employee regularly works overtime (Yes / No).

Data Quality Notes (address before final submission)

- Education Level: consolidate duplicate categories (e.g. "Bachelor Degree", "Bachelors", "Bachelor'S Degree", "Bsc" should all map to one "Bachelor's Degree" category; same for Masters variants) via Power Query Replace Values.
- Department: reconcile "Customer Support", "Cust. Support" and "Support" — these currently appear to split one department's figures across two or three labels.
- Compensation-by-gender visual: switch the measure from Sum of Monthly Salary to Average of Monthly Salary before drawing any pay-equity conclusion.
- Office attrition table: confirm the Nairobi attrition-rate figure, which was not visible in the dashboard view used for this report.
